

## **City of Treasure Island Master Pump Station Project**

**Proposed Recipient:** City of Treasure Island, FL

**Address of Recipient:** 120 108th Avenue, Treasure Island, FL 33706

**Amount of the Request:** \$1,217,000

**Explanation:** Funding would be used to reconstruct and elevate the City's master pump station to enhance its resiliency and improve operations. The pump station is more than 40 years old and its outdated equipment and electrical components, coupled with its low-lying location, make it incredibly vulnerable to failure both in the near-term due to severe storm and/or wind events, but also in the longer-term due to its susceptibility to sea level rise. By significantly enhancing the pump station's resilience, the City can effectively avoid a service disruption, as well as the much higher costs that would be incurred in the event of a system malfunction or failure.
